

## StorageQuest enables automated Milestone XProtect exports using Rimage hardware

---

Ottawa, Canada - June 2, 2017 - Powered by StorageQuest's software integration, users of Milestone XProtect<sup>®</sup> can now create automated, long-term to permanent export strategies. This extraordinarily tight integration promises to bring ease of use and implementation when performing large-scale exports of the Milestone XProtect database.

### *Long-term storage goals achieved*

Thanks to Milestone's Open Platform and Rimage's powerful hardware, long-term optical archiving is easily within reach.

By merging Rimage's Catalyst<sup>™</sup> 6000N disc publishing system and StorageQuest's Rook, Milestone XProtect<sup>®</sup> Management Client administrators of nearly any edition of XProtect can now sculpt and define archiving strategies which suit their needs. The new integration is capable of bulk exports of the XProtect database, but can also strongly focus on evidentiary exports for the concerned investigator.

StorageQuest Rook possesses a great deal of flexibility when it comes to deciding what data needs to be exported, when it needs to get exported, and in what formats. Bookmarks, evidence locks, or sequences can be targeted for exporting. Exported data discs are fully searchable from a standardized database utility, ensuring that at no point would proprietary software or utilities be needed in order to explore the export.

Supported Milestone XProtect editions include:

Corporate	Professional
Expert	Express
Enterprise	Husky M30, M50

Export types and formats include:

Bookmarks, Evidence Locks, Sequences  
AVI, MKV, JPG, and Milestone's own portable Smart Client format

Optical media is ideal for long-term storage, and WORM (Write Once Read Many) technology ensures the data is tamperproof. Combining the power of Rook from StorageQuest with disc publishing systems from Rimage, Milestone XProtect users now have long-term archiving capabilities not seen before.
